

AtHoc is the #1 solution provider to the U.S. Federal Government, protecting over 2M personnel worldwide.

AtHoc IWSAlerts Beneficial in the Deepwater Horizon Oil Spill

"By using network-centric alerting, we can quickly notify the community and process critical information much faster. The system's ability to collect information from all alert recipients also gives us unprecedented situational awareness. The result is the ability to make better decisions and communicate the information quickly to all stakeholders."

— U.S. Coast Guard
Lt. Commander Ted Kim

About Us

Founded in 1999, AtHoc is the pioneer and leading provider of enterprise-class, network-based mass notification systems for the security, life safety and defense sectors. As the #1 supplier to the U.S. Federal government, AtHoc protects over 2 million personnel across U.S. Military, Homeland Security, Public Safety, and other government agencies. Additional sectors served include healthcare, higher education, and large commercial organizations. The AtHoc system architecture is designed to support flexible cloud deployment configurations: private (on-premise), hosted (SaaS), as well as a hybrid combination. AtHoc's products are used for physical security, force protection, personnel accountability, recall and regulatory compliance.
