

Solution Highlights

- Transform the IP network into a mass notification system
- Integrate with Cisco UCM to deliver personal alerts to Cisco IP phone displays, landlines and cell phones
- Leverage external Managed Service for text messaging, paging and mass dialing
- Broadcast alerts to desktops, radios (IPICS), sirens, digital displays (DMP), cable TV, and social networks
- Track alert responses for real-time reporting and organizational accountability dashboard
- Personnel targeting via geo-based map, organization, group or on-the-fly database query
- Capture panic alert trigger from each Cisco IP phone, reported to operator
- Monitor physical sensors and data feeds to automatically trigger notifications
- Secure, highly scalable and redundant architecture
- Deployment options include both secure private cloud, secure public cloud and hybrid architecture
- AtHoc IWSAlerts is certified as Cisco Compatible
